DETAILED ACTION

Response to Amendment

1 Applicant amendment overcomes §102(e) rejection of claims 9, 10, 12, 13, 15, 16 and 20 and the rejection is withdrawn.

Applicant amendment overcomes §103(a) rejection of claims 11, 17, 18 and 19 and the rejection is withdrawn.

Applicant amendment overcomes objection to claim 14 and the objection is withdrawn.

Response to Arguments

2 Applicant's arguments, see amendment, filed 1 December 2008, with respect to angle variance and solid angles have been fully considered and are persuasive. The §102(e) of claims 9, 10, 12, 13, 15, 16 and 20 has been withdrawn. Applicant argues Diaz fails to teach an apparatus wherein the couplant allows for varying the angle under which the coupling to the entrance surface is performed in at least two solid angles. Further review of Diaz supports applicant argument that Diaz teaches a perpendicular or 90° entrant angle is required and any angular deviation from the perpendicular or 90° entrant angle leads to erroneous results.

Applicant arguments further persuasive regarding the §103(a) rejection of claims 11, 17, 18 and 19 and the rejection is withdrawn. Applicant argues Diaz fails to teach an apparatus wherein the couplant allows for varying the angle under which the coupling to the entrance surface is performed in at least two solid angles. Further review of Diaz supports applicant argument that Diaz teaches a perpendicular or 90° entrant angle is required and any angular deviation from the perpendicular or 90° entrant angle leads to erroneous results.

Allowable Subject Matter

3 Claims 9-21 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 9 recites, in part, "a transmit/receive probe, the transmit/receiver probe comprising a couplant for coupling to the entrance surface of the work piece, wherein the couplant allows for varying the angle under which the coupling to the entrance surface is performed in at least two solid angles". This feature **in combination with the remaining claimed structure** avoids the prior art of record.

Claims 10-19 depend from claim 9.

Claim 20 recites, in part, "optimizing the coupling of the transmit pulses to the work piece by moving the probe in at least two solid angles and in absolute terms with respect to the work piece". This feature **in combination with the remaining claimed structure** avoids the prior art of record.

Claim 21 recites, in part, "a transmit/receive probe, the transmit/receiver probe comprising a couplant for coupling to the entrance surface of the work piece, wherein the couplant allows for varying the angle under which the coupling to the entrance surface is performed in at least two solid angles". This feature **in combination with the remaining claimed structure** avoids the prior art of record.

It is these limitations, which are not found, taught or suggested in the prior art of record, and are recited in the claimed combination that makes these claims allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
